'The Location of Paradise & How Temples Transform the Soul'

Join Freddy Silva for an exclusive two-hour lecture with images

Can a temple transform ordinary humans into extraordinary beings?

Ancient texts speak of sacred sites as living entities where people are 'transformed into gods, into bright stars', and evidence shows how these places of power are indeed built at special locations using a sacred engineering that is capable of altering consciousness.

In this groundbreaking presentation featuring 120 images, best-selling author Freddy Silva will demonstrate how groups of initiates, sharing a singular vision, have been implementing a global plan since at least 15,000 BC that allows ancient temples to act as windows into a place called paradise.

And through the forces at work inside sacred sites, a transformation of the soul occurs, offering the individual mastery of the self and, ultimately, total self-empowerment.

Not only are temples repositories of an incredible ancient science, they also serve as an insurance policy - self-help centers for these times of change, when humans have lost sight of the fact they too are gods.

Freddy Silva is one of the world's leading researchers of ancient systems of knowledge and the interaction between temples and consciousness. He is also a best-selling author; his new book is *Common Wealth: The Origin of Sacred Sites and the Rebirth of Ancient Wisdom*. His previous book *Secrets In The Fields: The Science and Mysticism of Crop Circles* has been published in four languages. He is an international keynote speaker and has appeared on Discovery Channel, BBC, video documentaries and radio shows. Described by the CEO of Universal Light Expo as "perhaps the best metaphysical speaker in the world right now."
